Project 2 - Data Appendix

Unemployment Dataset

The unemployment dataset contains U.S. unemployment data by month, ranging from 1948 up to 2026. The unemployment is expressed as a percentage, categorizing those that are actively looking for a job but unable to find one. The dataset contains 5 columns in addition to the observation month—all show unemployment in different age brackets for more nuance. The data was gathered from the Federal Reserve Economic Data, Federal Reserve Bank of St. Louis, linked in the ReadMe references. There are no NaN, null, or error values in the dataset out of 937 total observations, each representing one month. Renamed columns are shown below, as the standard name is a complex string with little easily interpretable meaning.

Data Dictionary

Column	Description	Variable Type	Potential Responses
observation_date	Contains the date of the observation	Date-time object	2004-01-01
20-24	Percent unemployed between ages 20 and 24	float64	9.666667
25-34	Percent unemployed between ages 25 and 34	float64	5.766667
35-44	Percent unemployed between ages 35 and 44	float64	4.600000
45-54	Percent unemployed between ages 45 and 54	float64	4.000000
55 & Over	Percent unemployed for people 55 and over	float64	3.733333

Net Worth Dataset

The net worth dataset contains U.S. cumulative net worth data by quarter, ranging from 1989 through 2025. The net worth is expressed in millions of USD, summing the net worth of every bracket. The dataset contains 6 columns in addition to the observation quarter—all show net worth in different wealth brackets for more nuance. Notably, these brackets are NOT the same size. For example, one bracket (column) is the bottom 50% while another is the top 0.1% over time. The data was gathered from the Federal Reserve Economic Data, Federal Reserve Bank of St. Louis, linked in the ReadMe references. There are no NaN, null, or error values in the dataset out of 145 total observations, each representing one quarter (Jan 1, Apr 1, Jul 1, Oct 1). Renamed columns are shown below, as the standard name is a complex string with little easily interpretable meaning.

Data Dictionary

Column	Description	Variable Type	Potential Responses
observation_date	Contains the date of the observation	Date-time object	1990-04-01
99.9% to 100%	Wealth in Millions of the top 0.1%	int64	2904281
